

WipeMASter Drive Data Sanitizing System

The ImageMASter WipeMASter product is designed as a compact, stand-alone hardware solution for sanitizing and erasing sensitive drive data using Department of Defense standards. The unit supports sanitizing up to nine drives simultaneously at speeds exceeding 3GB/Min. The unit provides the tools necessary to quickly sanitize today's high capacity P-ATA and S-ATA drives*. The WipeMASter can sanitize different size and model drives in the same operation. These features, and more, make the WipeMASter an ideal, cost effective tool for the IT, Government and Forensic fields.

Built-In Features

- Easy to use, portable stand-alone system
- Erase up to 9 hard drives simultaneously
- Transfer rate can exceed 3 GB/Min
- Virtually no degradation in speed when adding drives
- Supports P-ATA
- Supports S-ATA and Notebook drives, including Flash devices with the purchase of additional adapters
- Software upgradeable through the Compact Flash Card
- DoD Wipe enables you to sanitize to the Department of Defense DOD5220-22M specification
- Mix different size and model drives in the same load
- Erase HPA and DCO areas
- Password Protected Settings
- Manage Multiple User Defined Settings
- Save Log files to Compact Flash
- Drives can be automatically partitioned and formatted with the optional FAT32 Format Add-On Option
- Fast Wipe allows erasing data in one quick pass

*With the purchase of S-ATA adapter

Description of Built-In Features and Options

● WipeOut DoD

This function is designed to erase all data on disk drives. Sanitize up to 9 drives simultaneously at speeds greater than 3GB/min. WipeOut was designed to meet the U.S. Department of Defense specification DOD 5220-22M regarding the sanitization of hard disk drive data. Each iteration makes two write passes over the entire drive.

● WipeOut Fast

The WipeOut Fast option provides a quick non-DoD method of sanitizing a drive of all previously stored data. Allows erasing data in one pass.

● HPA Option

The WipeMASter unit supports sanitizing HPA areas. HPA is defined as a reserved area for data storage outside the normal operating file system. If an HPA area exists on a drive, the WipeMASter will clear and erase the HPA area.

● DCO Option

The WipeMASter unit supports sanitizing DCO areas. DCO allows systems to modify the apparent features provided by a hard disk drive. If DCO is detected on the drive, the WipeMASter will clear and erase the DCO area.

● Format FAT32 (Optional)

The Format FAT32 option provides the capability of performing a quick FAT32 format on multiple drives. The operation creates a non-active FAT32 primary DOS partition on the drive(s) connected.

● Store Log and Database Information

The unit provides functions to display and store real time event information in a log and database format.

● Manage User Defined Settings

This built-in feature allows authorized users to store multiple user defined unit settings.

IM WipeMASter SPECIFICATIONS

Supply Voltage:	100-240V/ 50-60 Hz
Power Consumption:	10W without drives
Operation Temperature:	5 degrees-55 degrees C
Relative Humidity:	20%-60% non-condensing
Net Weight:	9 lbs
Overall Dimensions:	13.3" x 12.1" x 4.4"

Universal Auto-switching input voltage
